

Translational Nanomedicine:

Preserving Stem Cells

Self-Assembled Nano Stem Cell Carrier: we are able to keep stem cells alive in an undifferentiated state, for an extended period of time without using transformation agents or serum, prior to implantation.

Ellis-Behnke, R. G., Liang, Y.-X., Guo, J., Tay, D.K.C., Schneider, G. E., Teather, L.A., Wu, W. and So, K.-F. Forever young: how to control the elongation, differentiation and proliferation of cells using nanotechnology. (Accepted *Cell Transplantation*)
